

Functional Requirements

User Registration and Authentication

The system shall allow buyers, sellers, agents, and verification officers to register and log in securely.

The system shall authenticate users before granting access to protected features.

Property Listing Management

The system shall allow sellers to create, update, and remove property listings.

The system shall support uploading property images and legal documents.

The system shall display property details including price, location, type, and availability.

Property Search and Filtering

The system shall allow buyers to search properties using filters such as location, price range, and property type.

The system shall display search results in a user-friendly manner.

Shortlisting and Wishlist Management

The system shall allow buyers to shortlist properties for future reference.

The system shall allow buyers to manage their shortlisted properties.

Property Verification

The system shall forward newly created listings to the verification officer.

The system shall allow verification officers to approve or reject listings.

The system shall update the verification status of properties.

Site Visit Request and Approval

The system shall allow buyers to request site visits for verified properties.

The system shall notify sellers and agents of site visit requests.

The system shall allow sellers to approve or reject site visit requests.

Site Visit Scheduling

The system shall allow agents to schedule site visits after approval.

The system shall notify buyers and sellers of scheduled site visits.

Offer and Rental Request Management

The system shall allow buyers to submit purchase offers or rental requests.

The system shall allow sellers to accept or reject offers.

The system shall record offer history and status.

Deal Finalization

The system shall mark a transaction as completed after offer acceptance.

The system shall update property status after deal completion.

Notifications

The system shall notify users about important events such as approvals, rejections, and scheduling updates.

Non-Functional Requirements

Performance

The system shall return search results within acceptable response time.

The system shall support multiple concurrent users without performance degradation.

Security

The system shall ensure secure authentication and authorization.

The system shall protect user data and property documents from unauthorized access.

Usability

The system shall provide a simple and intuitive user interface.

The system shall be accessible to users with minimal technical knowledge.

Reliability

The system shall ensure consistent availability of property listings.

The system shall recover gracefully from system failures.

Scalability

The system shall support an increasing number of users and listings.

The system architecture shall allow future feature expansion.

Maintainability

The system shall be modular and easy to maintain.

The system shall support easy updates and bug fixes.

Compatibility

The system shall be compatible with major web browsers.

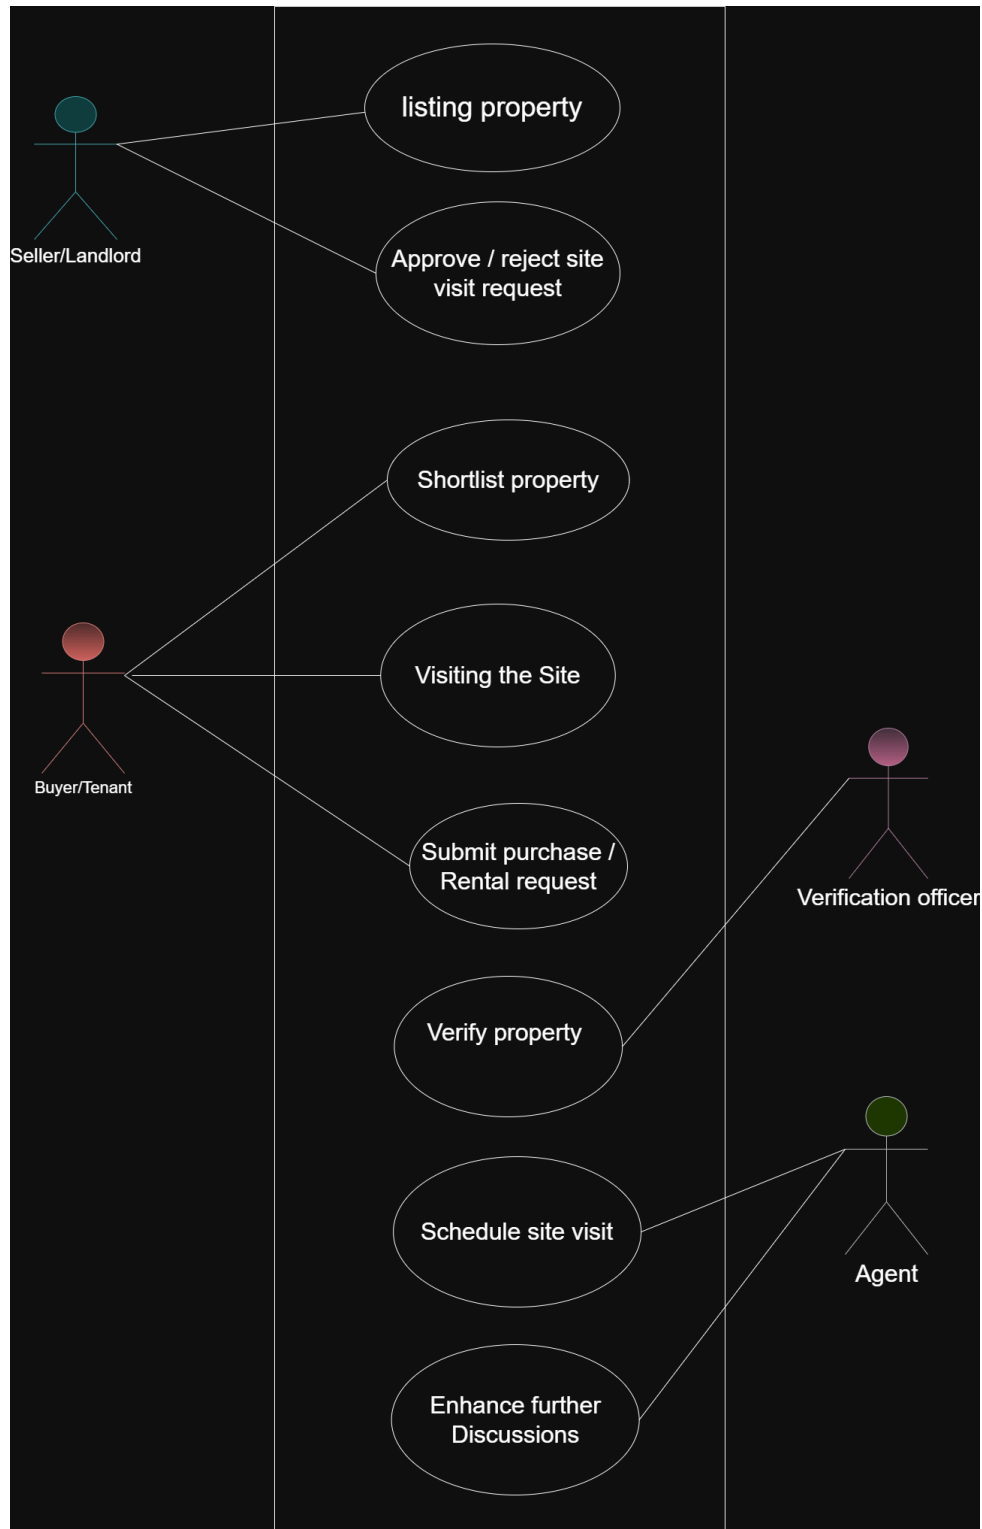

The system shall be responsive across desktop and mobile devices.

Data Integrity

The system shall prevent unauthorized modification of listings and transaction records.

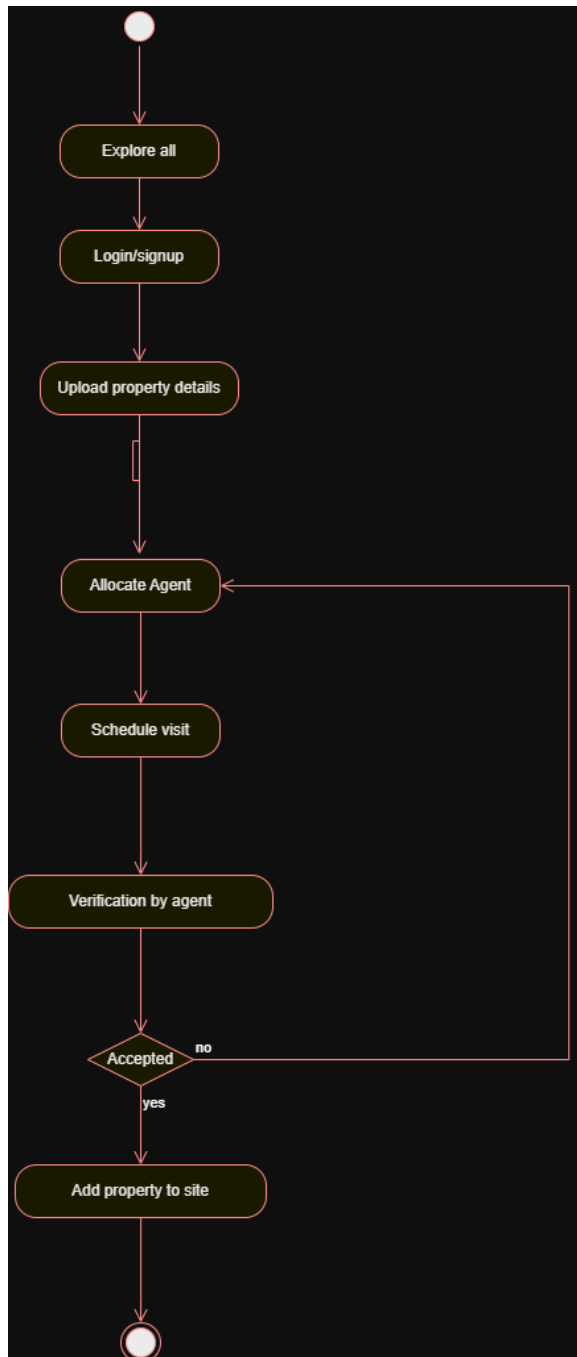

The system shall maintain accurate transaction and verification history.
